ABSTRACT

In accordance with an example embodiment of the present invention, there is provided an apparatus, comprising a receiver configured to receive sensor data, a transmitter configured to cause the sensor data, or data derived at least in part from the sensor data, to be transmitted, wherein the transmitter is further configured to transmit a metadata request to a first node. In some embodiments, the apparatus is a sensor node for inclusion in a sensor network, the sensor node capable of measuring at least one physical property to produce the sensor data.
